

AIDIL BIN ROZAIDI

Software Engineer · Mobile Developer · Full-Stack Developer · Quality Assurance Engineer · Software Tester

Petaling Jaya, Selangor, Malaysia | aidilkiy21@gmail.com | +6011-3196 4189 | [linkedin.com/in/aidil-rozaidi](https://www.linkedin.com/in/aidil-rozaidi) | aidildev.vercel.app

PROFESSIONAL SUMMARY

Software Engineering graduate with hands-on experience across **mobile app development**, **Generative AI (GenAI) & LLM-powered application development**, and **web-based enterprise systems**. Built a full-stack **Retrieval-Augmented Generation (RAG)** tool integrating **Gemini embeddings and LLMs** to answer natural-language questions about a codebase with source-level citations, and a **Flutter, Unity, and Firebase-based augmented reality navigation system**. Skilled in **responsive UI/UX design**, **RESTful API integration**, and cross-functional collaboration with stakeholders and engineering teams, complemented by professional experience in **Technical Support Trainee Associate**. Currently seeking opportunities as a **Software Engineer**, **Software Tester**, **Mobile Developer**, **Full-Stack Developer**, or **Quality Assurance Engineer**.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, C#, Dart, PHP, Kotlin

Web Frameworks: Angular, React, Next.js

Mobile Development: Flutter, Kotlin (Android)

Generative AI (GenAI) & LLM Integration: Retrieval-Augmented Generation (RAG), Large Language Models (LLMs) via Gemini API, Vector Embeddings & Similarity Search

Augmented Reality (AR) & Game Engines: Unity, AR Foundation, ARCore

Backend & APIs: Node.js, Express.js, RESTful APIs

Databases: Firebase (Auth, Firestore, Storage), MySQL, SQLite

Cloud & DevOps: AWS (Certified Cloud Practitioner), Docker, GitHub Actions (CI/CD)

Tools & Version Control: Visual Studio Code, Android Studio, Visual Studio, Git, GitHub

Design & UI/UX: Figma, Canva, Framer Motion

PROFESSIONAL EXPERIENCE

Technical Support Trainee Associate (K-Youth Programme) *April 2026 – Present*

The Access Group · Remote support for Australian customers

- Provide first-line technical support to Australian-based customers through inbound phone calls and voicemail callback services, resolving product- and account-related enquiries in a professional, timely, and customer-focused manner.
- Log, categorize, and manage customer support cases end-to-end in **Intercom** and **Salesforce**, documenting issue details, troubleshooting steps, and resolution outcomes to maintain accurate case histories.
- Gather, verify, and validate customer and account information against internal systems to ensure cases are logged correctly and routed to the appropriate specialist support team.
- Liaise with internal support, billing, and technical teams to track case progress, escalate complex issues, and follow up on outstanding tickets, contributing to faster resolution times and improved customer satisfaction.
- Manage a high volume of daily customer interactions while adapting communication style to diverse customer needs, building rapport and maintaining service quality standards.
- Escalate high-priority or sensitive cases following established protocols, ensuring compliance with data privacy and company support standards.

Analyst Programmer Intern *Mar 2025 – July 2025 (5 months)*

Al-Madinah International University

- Developed and maintained core modules of the **Agent Portal**, a web-based system used by recruitment agents and university staff to manage student registration and international recruitment workflows.
- Designed and implemented **responsive front-end interface components**, improving usability and visual consistency across desktop and mobile devices for agent and administrator users.
- Participated in requirement-gathering sessions with stakeholders and team members, translating business needs into functional features and technical specifications within an **agile development workflow**.
- Performed **functional and regression testing**, identified and resolved bugs, and optimized code prior to deployment, improving overall application stability and reliability.

- Collaborated with backend developers to integrate front-end components with **RESTful APIs**, ensuring smooth and reliable data flow between the Agent Portal and university systems.
- Contributed to sprint planning and code review sessions, gaining hands-on exposure to industry-standard software development practices and team collaboration workflows.

KEY PROJECTS

RepoChat – RAG-Based Codebase Q&A Tool (Personal Project) | *React · Vite · Express · TypeScript · Gemini API · RAG · SQLite · Docker*

- Built a full-stack **Retrieval-Augmented Generation (RAG)** application that lets users ask natural-language questions about any public GitHub repository and receive answers grounded in the actual source code, with file- and line-level citations.
- Implemented an **ingestion pipeline** that fetches a repository's file tree via the GitHub REST API, filters to relevant source and documentation files, and splits each file into overlapping chunks for indexing.
- Generated vector embeddings for each code chunk using **Gemini's embedding model** and stored them in SQLite, implementing in-process **cosine similarity search** to retrieve the most relevant context for a given question.
- Integrated **Gemini 2.5 Flash** to generate answers strictly grounded in retrieved code excerpts, reducing hallucination and ensuring every answer is traceable to a specific file and line range.
- Developed a **React and Vite** front-end providing a chat interface with expandable source citations, backed by an **Express/TypeScript** API handling ingestion and query requests.
- Containerized the application with **Docker** and configured a **GitHub Actions** CI workflow, deploying the project independently as a personal portfolio piece.

MIITGuide – Augmented Reality Navigation System (Final Year Project) | *Flutter · Unity · Firebase · AR Foundation · ARCore · XR Technologies*

- Designed and built a cross-platform mobile application, combining a **Flutter** front-end with a **Unity-based AR engine**, to guide users through a multi-story campus building using real-time augmented reality overlays — addressing the challenge of indoor navigation where GPS signals are unreliable.
- Implemented an **offline-first AR navigation engine** using **AR Foundation, ARCore, and XR technologies**, enabling accurate indoor positioning and turn-by-turn AR wayfinding without requiring an internet connection.
- Architected the backend using **Firebase** for user authentication, data storage, and content management, ensuring secure and scalable handling of user accounts and campus location data.
- Engineered **role-based access control** for three user types — students, guests, and administrators — enabling tailored navigation features, permissions, and administrative tools for managing building maps and content.
- Applied **XR development principles** to render 3D directional markers and points of interest overlaid on the live camera feed, improving wayfinding clarity for first-time visitors to the building.
- Designed the **information architecture and navigation flow** for the mobile app, balancing ease of use for first-time visitors with advanced management options for administrators.
- Conducted testing and gathered feedback from students and staff to refine navigation accuracy and interface usability, incorporating findings into iterative design improvements.
- Presented the completed system to academic supervisors and peers, demonstrating the AR navigation experience and addressing technical questions on system architecture.
- Independently managed the project as a Final Year Project, covering requirements gathering, system design, implementation, testing, and documentation within an academic timeline.

EDUCATION

Bachelor Of Information Technology (Hons.) in Software Engineering *Feb 2022 – July 2025*

UniKL Malaysian Institute of Information Technology (UniKL MIIT)

- CGPA: 3.30/4.00 · Dean's List Award (2022)

Diploma in Business Information Technology *May 2019 – Jun 2021*

Kolej Profesional Mara Seri Iskandar

- CGPA: 3.41/4.00 · Dean's List Award (2020, 2021)

CERTIFICATIONS

- **AWS Certified Cloud Practitioner** — cloud computing fundamentals, core AWS services, and cloud architecture best practices (Amazon Web Services)
- **Google Project Management Certificate** — project planning, agile methodologies, and stakeholder management (Coursera)

LANGUAGES

- Bahasa Melayu (Native)
- English (Proficient – MUET Band 4)

LEADERSHIP EXPERIENCE

Resident Council Representative *Feb 2020 – Feb 2021*

Kolej Profesional Mara Seri Iskandar

- Represented the student body by addressing concerns and coordinating initiatives to improve campus living conditions.
- Organized and managed student activities and events, enhancing engagement and community participation.

Committee Member (College Sports Council) *Feb 2020 – Feb 2021*

Kolej Profesional Mara Seri Iskandar

- Coordinated college-wide sports competitions and hostel events, fostering teamwork and collaboration among students and administration.
- Supported event planning and logistics, ensuring smooth execution of large-scale activities.
